Special Issue ACIG 2024

vol. 3 no. 1

The Russian-Ukrainian War: Effects on Global Cybersecurity and Digital Infrastructure

The war in Ukraine has evolved into an expression of the geopolitical rivalry between the West and Russia, a rivalry in which Russia can count on the political support of China and the so-called Global South. This tension is extending into the digital ecosystem. However, the pressure to innovate, digitalize and stay ahead of the technological curve goes well beyond the political context. To emphasize the multidimensional and complex role of cyber technology in today's world, interdisciplinary research, as advocated by Applied Cybersecurity & Internet Governance, is indispensable.

The special issue, guided by Prof. Jacek Leśkow as Guest Editor, invites contributions from scholars and practitioners, grounded in theoretical and empirical investigations related to technical and operational facets of cybersecurity, the impact of AI, machine behavior and learning, threats and risk analysis. This volume aims to bring together analyses covering a broad spectrum of topics relevant to cyberspace.

Deadlines

OCTOBER 15, 2023

Deadline for proposal or abstract submission

NOVEMBER 30, 2023

Deadline for full paper submission

SPRING 2024

Tentative date of online publication
(hardcover publication anticipated in [Autumn 2024](#))

Double-blind peer review

An invitation to contribute a manuscript to this special issue does not guarantee acceptance. All papers undergo a double-blind peer review process.

Paper submission

All manuscripts should be submitted
via the online submission system: [HERE](#)

Instruction for Authors: [HERE](#)

For additional information, contact the ACIG editors at contact@acigjournal.com

Guest Editor

Prof. Jacek Leśkow

(Dean EPAM School of Digital Technologies American University Kyiv, Ukraine)
